Executive Summary

Fig 1. Creative Reuse Workshop Hosted by Reverse Garbage
(Source: Official Reverse Garbage Website, 2026)

The report summarizes the development strategy of Reverse Garbage (RG) in the B2B education sector. RG is a non-profit social enterprise with a 50-year history, whose mission is Creative Reuse. Currently, RG's business initiatives face several barriers to growth: a lack of high-quality client bases, low penetration rates among companies and universities, and a gap between market demand and actual supply.

This study employs a mixed-methods approach, combining in-depth interviews with executives, surveys and industry policy analysis. The findings indicate that the primary reason for corporate reluctance to collaborate with RG is the importance placed on quantitative ESG data and brand recognition. The low level of university participation stems from the fact that master's programme content focuses on theoretical education, making it difficult to integrate into professional curricula and promote practical application.

On this basis, three recommendations and specific strategies are proposed. Firstly, to engage in targeted collaboration with relevant university departments. Secondly, to establish partnerships with sustainable enterprises that integrate ESG values into a closed-loop system. Thirdly, to reposition workshops and introduce transparent workflows.

1 Introduction

About Reverse Garbage

Reverse Garbage (RG) is an Australian non-profit social enterprise with a 50-year history, headquartered in Marrickville in Sydney's Inner West. With mission of **Creative Reuse**, RG is dedicated to salvaging industrial waste materials from landfill sites and breathing new life into them through retail, education and community activities. Its operations encompass three areas: a retail warehouse for reused materials open to the public; **sustainability education workshops** for schools, communities and businesses; and the promotion of circular economy practices through partnerships with volunteers, local authorities and businesses.

Fig 2. History of Reverse Garbage
(Source: Official Reverse Garbage Website, 2026)

1.1 Project Issues and Objectives

RG possesses unique strengths in terms of social impact and brand recognition; however, preliminary research has identified three key issues that are constraining the growth of its B2B business projects. Firstly, **the client base** is becoming increasingly homogeneous, and there is a disconnect between perceived and actual needs. Secondly, there is a gap between the **value delivered and market perception**. Thirdly, **organizational structures and resource constraints** are hindering the scaling up of the B2B business.

The overall objective of this project is to produce a report for RG on a market expansion strategy for B2B educational workshops, focusing specifically on two sub-objectives: firstly, to increase the number of partnerships with corporate clients and steadily improve revenue levels for university clients by reforming the system of interaction between enterprises, universities and industry; and secondly, to enhance satisfaction and repeat business rates among corporate and university clients by optimizing the value proposition and project design of the workshops.

1.2 Report Structure

This report is divided into six core sections: Introduction, Research Methodology and Data Collection, Market Analysis, Strategic Recommendations, Implementation Risk Analysis, and Conclusions, systematically presenting the complete logical chain from problem diagnosis to solution.

2 Research Methodology

This report employs a **mixed-methods approach**, combining primary and secondary data to achieve triangulation.

2.1 Primary Data

Table 1. Primary Data Collection Methodology Overview

Methodology	Detailed Overview
In-depth Interviews with Senior Management	✓ Methodology: Semi-structured in-depth interviews (approximately 60 minutes per round, two rounds in total) ✓ Sample/Scope: RG CEOs and heads of education programmes ✓ Key topics: Customer profile, business pain points, strategic requirements, current operational status ✓ Use of data: To serve as the core factual basis for the full report analysis, to validate the reliability of questionnaire findings, and to gain an in-depth understanding of underlying business issues
Questionnaire Survey	✓ Methodology: Structured questionnaire ✓ Sample size: Decision-makers (n=38), participants (n=161) ✓ Key findings: for decision-makers, purchasing motivations, decision-making factors, satisfaction is significant ; for participants, experience, learning outcomes, intention to change behaviour is important ✓ Use of data: To cross-validate findings from interviews; not to be used as the sole basis for core conclusions
Analysis of user-Generated Content	✓ Specific Method: Analysis of social media content ✓ Sample/Scope: User-generated content (UGC) on Instagram and LinkedIn ✓ Key Focus: User needs and evaluation criteria relating to sustainability workshops and corporate ESG initiatives ✓ Data Purpose: Serve as a supplementary data source for identifying high-frequency user needs

2.2 Secondary Data

Table 2. Secondary Data Collection Methodology Overview

Methodology	Detailed Overview
Industry Policy Analysis	✓ Specific approach: Systematic review of policy documents ✓ Samples/scope: NSW Education Standards Authority K-10 sustainability curriculum requirements, ASIC climate disclosure regime, TEQSA policy framework for WIL ✓ Key focus: Verifying the rigour of policies in meeting stakeholder needs ✓ Data purpose: Industry policy analysis
Competitor and Market Research	✓ Methodology: Comparative analysis of competitor features + reference to industry reports ✓ Data scope: Competitor product formats, pricing strategies, and target customer segments; PwC/KPMG corporate ESG trend reports; Statista industry data ✓ Key objectives: Identify opportunities for RG to differentiate itself and capitalise on market trends ✓ Purpose of data: Competitor and market research
Supporting Academic Literature	✓ Specific method: Citations from peer-reviewed literature ✓ Sample/scope: Academic literature in the fields of B2B customer experience, sustainable education and social enterprise growth ✓ Core content: Providing theoretical underpinnings for demand mismatch analysis and the design of growth strategies ✓ Use of data: To support academic literature

2 Research Methodology

2.3 Data Limitation

When interpreting the research findings, the data in this report is subject to the following limitations. **Firstly, there is a sampling bias in the questionnaire.** The proportion of students among survey participants was 41%, which does not align with the current situation where RG has zero penetration in university classrooms. The primary reason for this may be that RG recently organized special workshops for students on the COMM5030 course, leading to a temporary increase in student participation. Consequently, in the analysis of university classrooms, the survey data is used solely as reference material, with the primary focus being on interview data and industry policy analysis. **Secondly, there is a distortion arising from social expectations.** The proportion of affirmative responses in the survey was very high (with negative responses accounting for less than 5%), which may indicate that respondents were inclined to provide answers that 'conform to social expectations'. Consequently, when analyzing pain points, priority should be given to analyzing interview data and user-generated content. **Thirdly, the sample size of companies is limited.** RG's current client base is relatively small, resulting in a limited number of companies surveyed; analysis of some companies is based on qualitative observations derived from interviews with management.

(Source: Official Reverse Garbage Website, 2026)

3 Marketing Analysis and Findings

Fig 4. Creative Reuse Workshop Hosted by Reverse Garbage
(Source: Official Reverse Garbage Website, 2026)

3.1 Macro Market Analysis

This section analyzes the impact of the external environment on RG's development opportunities in the fields of enterprises, higher education and K-12. At the national level, policy support for reuse, remanufacturing, recycling and resource productivity is increasing. **The Environmentally Sustainable Procurement Policy** points out that public sector procurement is turning to products and services with less emissions, environmentally friendly and long-term value (Department of Climate Change, Energy, the Environment and Water 2024a; 2024b). These trends have created favorable conditions for RG to position corporate workshops as practical circular economy practice activities rather than leisure-based team-building activities.

In terms of higher education, the Tertiary Education Quality and Standards Agency (TEQSA) supports **practice-oriented learning and industry-academia-research cooperation**, including establishing partnerships with external institutions such as RG. These cooperative activities are conducive to applied learning and industry participation (Tertiary Education Quality and Standards Agency 2022). **In K-12 education**, sustainability has been included in the curriculum and **supported by the protection, reuse and recycling of resources**, which strengthens the relevance of resource management in schools (NSW Education Standards Authority 2023; NSW Department of Education 2024).

3 Marketing Analysis and Findings

3.2 Competitor Analysis and Positioning

3.2.1 Market Positioning overview

Starting from the two dimensions of **sustainable development attention and experiential participation**, this section divides competitors into four quadrants. The analysis targets include non-profit organizations and for-profit companies, which are classified into high-sustainability high-experiential, high-sustainability low-experiential, low-sustainability high-experiential, and low-sustainability low-experiential. For RG, moving towards a high sustainability high-experience quadrant is a key strategic direction. For this reason, RG needs to improve the experience of the workshop while maintaining its strong concept of sustainable development. Figure 5 shows the positioning of RG and some competitors in the framework. The evaluation criteria and detailed scoring rules for high-sustainability high-experience competitors will be introduced below.

Fig 5. Market Positioning Matrix of Reverse Garbage and Competitors in Sydney

3 Marketing Analysis and Findings

3.2.1 Market Positioning overview

Table 3. Evaluation Criteria and Weighting for Sustainability Relevance Dimension

Criteria	Score
Core focus on circular economy (reuse, repair, recycling)	+2
Demonstrated environmental impact (e.g., measurable outcomes, long-term programs)	+1
Additional evidence of measurable or large-scale impact	+1
Sustainability is included, but not core	+0.5
No clear sustainability component	0
Use of non-sustainable materials or practices	-1

Table 4. Evaluation Criteria and Weighting for Experiential Value Dimension

Criteria	Score
High-quality, well-designed interactive team experience	+2
Clear corporate workshop structure	+1
High-value tangible outcomes (desirable take-home products)	+1
Clear pricing and booking process	+1
Basic interaction but limited design quality	+0.5
Passive / not corporate-oriented	-1
Low perceived value of outcomes	-1

Table 5. Detailed Dimension Scoring Breakdown for High Sustainability & High Experiential Value Quadrant Competitors

Reverse Garbage

Dimension	Score breakdown	Total
Sustainability	+2 (circular economy core) +1 (long-term impact) +1 (measurable impact)	+4.0
Experiential	+2 (hands-on) -1 (unclear booking/pricing) -1 (low perceived outcome value)	+2.0

Among the Trees

Dimension	Score breakdown	Total
Sustainability	+2 (recycling core) +1 (measurable impact)	+3.0
Experiential	+2 (interactive) +1 (tangible product) +1 (four corporate-ready activities type) +1 (clear booking)	+5.0

Banish

Dimension	Score breakdown	Total
Sustainability	+2 (reuse materials) +0.5 (embedded sustainability)	+2.5
Experiential	+2 (hands-on) +1 (high-quality product) +1 (corporate structure) +1 (clear pricing)	+5.0

Pocket City Farms

Dimension	Score breakdown	Total
Sustainability	+2 (core sustainability focus) +1 (impact)	+3.0
Experiential	+2 (hands-on) +1 (four corporate-ready activities type and volunteering provided) +0.5 (limited tangible outcomes)	+3.5

3 Marketing Analysis and Findings

3.2.2 Position of Reverse Garbage

The main advantages of RG include its credibility, long history and measurable environmental impact in Sydney's reuse and circular economy. To be transformed into an opportunity for future enterprise cooperation, RG also needs to **further improve its workshop experience and service presentation.**

At present, compared with stronger enterprise workshop providers, the experience value of RG is at a moderate stage. Its activities are closely related to reuse and sustainable development education, but the workshops are relatively simple and mainly handmade. Results such as card making, basic sewing repair or ornaments may not clearly show the uniqueness, practicality or value expected by adult business participants. Therefore, these activities may be difficult to distinguish from daily manual activities. This may reduce the perceived value of the participants when employees need to go on business trips or participate outside their normal working hours.

From the perspective of decision-makers, RG's enterprise service plan is not clear enough. The existing information mainly shows some previous corporate activities, rather than clear workshop options. Key details such as price, duration, group size, booking process, customization options and expected results have not been communicated consistently. This will make it difficult for companies with limited time and budget to judge whether RG's seminar is in line with their employee dedication, ESG communication or sustainable development culture goals. Therefore, the main weakness of RG lies not in its sustainable development credibility, but in the **packaging, communication and experience** of its corporate workshops.

Fig 6. CEO of Reverse Garbage
(Source: Official Reverse Garbage Website, 2026)

3 Marketing Analysis and Findings

3.2.3 What RG Can Learn from Competitors

In the quadrant of **high sustainability and high experiential**, competitors provide the most relevant benchmark for RG. Their advantage lies not only in providing activities related to sustainable development, but also in presenting these activities as a clear, flexible and result-oriented enterprise experience.

Banish gave four clear business options. These options include team building workshops, office activities, a customized reusable speech and recycling package. They are different in terms of time investment, location and goals. For example, workshops held in Haymarket require higher employee participation but remain convenient in transportation, while office activities can be carried out in the workplace, with lower time-consuming and travel costs. The speech focuses more on education, and the recycling box provides a simple sustainable development action in the workplace.

Pocket City Farms also provides a variety of structured options. These options include half-day or full-day experiences, urban farming activities, site visits, food-related activities, optional lunches and corporate volunteer activities. The advantages of these activities are their immersion and goal-oriented. Participants can not only learn about sustainable development, but also participate in the real site environment and contribute to the practical improvement of the community or the environment.

The reason why **Among the Trees** is successful is that the results of its workshop are practical, durable and fancy. Participants can make functional items from recycled wood, which enhances the value of the experience. Clear price and expected results also make it easier for enterprises to understand the products or services they purchase.

3 Marketing Analysis and Findings

3.2.3 What RG Can Learn from Competitors

These competitors together show that the successful enterprise sustainable development seminar has three common advantages. These three advantages are **clear service packaging, meaningful participation and valuable gains**. Banish allows enterprises to easily understand the purpose of each option, the degree of participation required, and the enterprise value it can bring. Pocket City Farms shows that workshops are more attractive when they are not just educational courses, but more like a shared experience. This is especially evident when the workshop links participants to volunteering, community welfare, or visible environmental impacts. Among the Trees emphasizes that the final result is crucial, because a practical and satisfactory harvest can enhance the experiential value of the participants. For RG, the key is to improve its services and divide the workshop into clearer categories according to goals, forms, time required, place and expected results. At the same time, RG also needs to strengthen the connection between material recycling, participant experience and practical harvest.

RG can also learn from some **highly experiential but less sustainable** activities. These activities include painting tastings, jewelry making, handmade noodles, pottery and tufting. Although the sustainability value of these activities is low, they are effective because they are social, relaxed and result-oriented. Participants usually take away some personal, practical or pleasant items. Some activities will also provide drinks or snacks, which makes the experience more relaxed and casual. RG does not need to copy these forms directly, but can learn from some experience elements, such as a more relaxed environment, more thoughtful service and more attractive take-away products.

In contrast, the priority of learning the quadrant of **low sustainability and low experience** should be reduced. For example, online courses may not be the most suitable growth direction at this stage. They cannot make full use of RG's advantages in physical materials, practical reuse and face-to-face learning. In addition, online courses also face wider competition and require strong digital education design. Therefore, RG's resources may be more used to improve its offline corporate seminars, rather than investing a lot of money and human resources in online learning products.

3.2.4 Key insight

With its long history and measurable influence, RG has a good reputation in sustainable development. However, in order to transform this credibility into a stronger corporate demand, RG needs clearer service options, richer gains and a more attractive workshop experience. Competitors' cases show that when the impact of sustainable development is transformed into an accessible and enjoyable employee experience, corporate customers will give positive feedback. Any improvement should be kept pragmatic within the scope of RG's cost, staffing and operational limitations.

3 Marketing Analysis and Findings

3.3.1 Customer Profile

This section shows the demographic characteristics of RG B2B customer groups in the form of charts, and divides them into two perspectives: **decision-makers** and **workshop participants**. The data used in the chart comes from the survey results released by the COMM5030 course at the University of New South Wales. The survey collected a total of 38 valid replies from decision-makers and 161 valid responses from participants.

Composition of Decision-Makers by Organisation Type (N = 38)

Fig 7. Demographic Breakdown of Surveyed B2B Workshop Decision-Makers (Total Sample = 38)

Composition of Workshop Participants (N = 161)

Fig 8. Demographic Composition of Workshop Participants (Total Sample = 161)

Figure 7 shows the categories and proportions of decision-makers in major institutions. At present, the decision-maker group is most concentrated in the education category, among which K-12 schools are the largest single customer category. Small and medium-sized enterprises rank second. Large enterprises and universities account for the smallest proportion.

As illustrated in Figure 8, the majority of participants were university students, accounting for 41.0%; teachers/educators and primary and secondary students—who represent the K-12 decision-making group—accounted for a combined 36.0%; and corporate employees represented the SME decision-making group (13%).

3 Marketing Analysis and Findings

3.3.2 Early Childhood & K12 Segment Analysis

The Early Childhood & K-12 segment primarily consists of Early Childhood Education and Care (ECEC), Primary Schools, Secondary Schools, and Out-of-School Hours Care (OOSH) (COMM5030 2026); it ranked highest in workshop participation based on RG staff observations (COMM5030 2026). 63.2% of decision-makers rated **sustainability/environmental education** as extremely important (RG survey, n=38). The **participant** survey results indicate that teachers prefer **ready-to-use activities**, and minimal planning facilitates activity implementation. Students in this group prefer **creative, hands-on activities**.

In the survey, decision-makers cited the provider's reputation (87%), relevance to institutional goals or learning outcomes (76%), and the quality of the workshop or the trainer's expertise (74%) as the primary reasons for **selecting a workshop**. Cost-effectiveness was not a primary consideration. This indicates that educational purchasers prefer reputation and objective alignment. CEO also noted that partner workshops are customized for different age groups and curricula, ensuring a close connection to instructional requirements. This suggests that RG should continue to translate sustainability concepts into curriculum designs aligned with the curriculum in the Early Childhood & K-12 segment. However, although the willingness of educational institutions to buy is strong, their budgets are very limited (COMM5030 2026). This shows that RG still needs to consider the budget factor.

Judging from the feedback of the participants, 79% of them gained practical knowledge about recycling and waste reduction. 63% of people said they were more motivated to take action. 56% of people think that practical experience is valuable. These data show that the participation and creativity of stakeholders have improved. The above findings are consistent with the results of educational research (Beard and Wilson 2013). The study shows that active learning is better than passive learning in terms of knowledge retention and behavior change. This concept is also in line with Reverse Garbage's current **sustainable competitive advantage** in the education market.

3 Marketing Analysis and Findings

3.3.3 Corporate Segment Analysis

The survey results show that the response rate of enterprises is low, so the survey results may not fully reflect the actual demand. Nevertheless, the management still believes that the group has purchasing power and cooperation potential. Generally speaking, the feedback given by the enterprise is positive. However, the respondents who expressed dissatisfaction did not provide specific reasons, so it is difficult to make a detailed analysis of this part of the opinion. Based on this situation, the analysis of this section is based on the content of the meeting.

The CEO mentioned that some companies have expressed interest in signing annual sponsorship agreements. The survey found that the motivation of corporate decision-makers is mainly driven by three factors: **team building**, **measurable social impact**, and **improving corporate reputation through cooperation**. These motivations are consistent with the conclusions of the ESG research report. Enterprises are increasing investment in internal sustainable development initiatives to build the trust of stakeholders (PwC Australia 2026). The management interview also showed that the interviewed employees thought that **activities with strong interaction and low pressure** were the most suitable. This judgment is consistent with the results of the survey. According to the survey, employees prefer practice-oriented and action-oriented seminars (Yang 2025). Finally, it should be pointed out that although enterprises are more sensitive to the cost of one-time seminars, they show less interest in establishing long-term cooperative relationships.

There is **a value gap** between stakeholders. Corporate management tends to favor activities whose outcomes can be shared externally; participants prefer highly interactive experiential activities; while RG's workshops place greater emphasis on educational-oriented literacy training and behavioral change. The article notes that organizational purchasing behavior itself constitutes a multi-stakeholder "buying center," where the purchase stage and usage stage are equally important (Cabanelas, Moreira & Ferreira 2023). Therefore, when multiple stakeholders are involved in purchasing decisions, clearly articulating business outcomes can be more persuasive, which explains why companies prefer quantifiable activity results. RG is better suited to firms seeking deeper employee mindset change. Low willingness to engage in long-term collaboration may indicate that companies are offering only short-term, symbolic support. This explains why few actually opt for RG-style workshops.

3 Marketing Analysis and Findings

3.3.4 University Segment

University clients represent the segment with the lowest engagement levels for RG, specifically encompassing disciplines such as design, environment, engineering, the arts, and sustainability-related fields; furthermore, RG has never developed courses specifically tailored to this client group.

Decision-makers within this group are typically program directors, deans, or university project leads. Their primary objective in participating in these workshops is to create teaching scenarios for sustainable design and to meet the assessment requirements for Work-Integrated Learning (WIL).

Fig 9. WIL participation rates by broad discipline area—unique headcount

According to Figure 9 (Universities Australia 2019), the WIL participation rate for environment-related disciplines reached 56.5%, while participation rates for design and built environment programs ranged from 37.9% to 44.2%. This indicates a strong, unmet demand for **practical, hands-on learning experiences** in fields directly relevant to RG's core offerings.

Based on the survey, 41% of participants were university students. This contradicts the findings from interviews with decision-makers and management, which indicated that university students remain one of the groups with the lowest participation rates. This discrepancy may be due to a recent workshop organized by RG specifically for students enrolled in the COMM5030 course, which led to a significant increase in the proportion of university students participating; therefore, the reliability of this data is low, and it is excluded from consideration.

Overall, RG currently does not offer standardized products tailored to universities; however, there is potential for sustainable project partnerships with university **WIL-related programs**, and the demand for practical training in these fields is on the rise.

4 Recommendation

According to the findings, the main reason for the low engagement of enterprise and university participants is that RG's existing products and services do not meet their expectations. Based on these pain points, the following suggestions are put forward.

4.1 Recommendation for General Workshop

01

01 Workshops with Tangible Outcomes

RG can learn from the concept of Among The Trees, adapt the content of the handicraft course to ensure that each participant leaves with a practical handcrafted item made by themselves (Among The Tree 2026). Practical handicrafts such as pet toys and storage supplies can make participants feel that they have a real gain. The specific handicrafts can be planned based on the existing materials.

Plastic Bottle Hanging Decor

Plastic Bottle Hanging Decor

Plastic Bottle Hanging Decor

Plastic Bottle Hanging Decor

Fig 10. Handmade Upcycled Merchandise Example of Reverse Garbage
(Source: AI-generated illustration, Seedream 2.0, 2026)

4 Recommendation

4.1 Recommendation for General Workshop

02

Transparent Reservation Process

As mentioned in the market analysis session, currently, the competitors of RG are able to highlight their strengths through clearly communicated workshop descriptions. In contrast, workshop introductions on the RG website are relatively vague and not detailed enough. To address this, listing the specific event schedule and inclusions on the website like Pocket City Farm does (Pocket City Farm 2026) is a good approach. Clearly state all the arrangements for the seminar, including the duration, group size and workshop structure. Transparent price tiers and included contents should also be provided. This can reduce decision-making friction and improve the efficiency of reservation communication.

Fig 11. Interactive Group Experience at Reverse Garbage B2B Workshop
(Source: AI-generated illustration, Seedream 2.0, 2026)

4 Recommendation

4.1 Recommendation for General Workshop

03

Provide Professional Certificates

It is advisable to consider introducing a structured ESG recognition and impact reporting system to transform participation into measurable and reportable outcomes. RG can learn Banish to provide impact reports and ESG certificates to enterprises (Banish 2026). Meanwhile, offering participant certificates to recognize their contribution to sustainable development. In the impact report for the enterprises, add a community contribution statement and highlight the part of the workshop income that is reinvested in community projects. This method can position the workshop not only as a meaningful event but also as a credible and reportable ESG initiative.

**Corporate Group
Certificate**

**Volunteer Participation
Certificate**

**Primary School Student
Certificate**

**University Student
Certificate**

Fig 12. Participation Certificate of Reverse Garbage
(Source: AI-generated illustration, Seedream 2.0, 2026)

4 Recommendation

4.2 Recommendation for cooperate with Enterprises

04

Strategic Partnerships

Cooperation with sustainable brands is a win-win situation. Brands such as Who Gives A Crap provide sustainable products and also have intention to accept affiliation and cooperation (Gives A Crap 2026).

On the one hand, RG puts sustainable brand's products into the workshop benefit package and recommends participating companies to purchase those products. On the other hand, while advertising for sustainable brands, it is also possible to obtain stable participants in RG workshops and gain more feedbacks to further optimize the activity process.

Furthermore, for those large sustainable development brands, RG can also create a brand guide for purchasing daily necessities every year. Enterprises, especially large enterprises, are increasingly ESG demands. This approach can further enhance RG's reputation and not only effectively influence consumers but also help attract more sustainable development brands to actively seek cooperation.

Fig 13. Strategic Partnership of Reverse Garbage
(Source: AI-generated illustration, Seedream 2.0, 2026)

4 Recommendation

4.3 Recommendation for cooperate with University

05

Practice Partnership

There is room for the connection of sustainable projects in WIL-related (Work-Integrated Learning) majors in universities, and the practical demands of related majors are on the rise. Therefore, RG can continue to deepen their cooperation with universities, adopt a demand-driven university cooperation model and provide more opportunities for WIL.

In view of that UNSW attaches to this section, priority can be given to cooperating with them. Currently, RG has already collaborated with UNSW business schools. On this basis, it is additionally recommended to work with other disciplines and majors. For example, regarding the issue of warehouse management mentioned by RG in the client meeting, it is possible to consider collaborating with courses in the supply chain specialties (COMM5030 2026).

Fig 14. Waste Upcycling Art Installation & Exhibition Display
(Source: AI-generated illustration, Seedream 2.0, 2026)

Moreover, collaborate with design or art majors to solve the problem of material use and display together. Encourage students to use RG recycled materials to carry out graduation projects or participate in innovation competitions. Collaborating with the design school, RG can design series of cultural and creative products that reflect the brand value.

Fig 15. Custom IP Mascot & Brand Visual of Reverse Garbage
(Source: AI-generated illustration, Seedream 2.0, 2026)

5 Considerations, Risks or Challenges

The risk assessment was based on team proposals. Firstly, there is a potential risk regarding **market acceptance**, as the workshops are shifting from an education-focused model to a hybrid model combining 'fun crafts and charity'. The education sector may perceive the new format as lacking in seriousness, whilst corporate clients might view the activities merely as low-quality corporate events rather than experiences with ESG significance. To mitigate this risk, RG plans to first collaborate with existing partners such as Canva on small-scale pilot projects to demonstrate the proposal's value through practical examples, before scaling up. In other words, demonstrating the proposal's value through real-world cases is more important than making a complete shift to a new direction. When recommending projects, it is also essential to consider the individual needs of each client.

Secondly, **feedback** provided by client companies acting as 'satisfaction consultants' may have a significant impact on RG's product strategy. In partnerships with universities, due to differences in approval procedures between faculties, it may be necessary to provide 'tailored' solutions for each faculty. Consequently, RG needs to establish a clear partnership framework that defines the responsibilities and scope of authority for both parties, whilst maintaining the primary educational objectives, to prevent situations where a single partner is insufficient.

Thirdly, pursuing three business lines simultaneously risks **overburdening** RG's limited human resources and operational capacity. The primary challenge is that an excessive focus on market growth could dilute the legacy RG has built over 50 years in the field of community education. We therefore recommend a phased implementation strategy rather than launching all initiatives at once. The first year should focus on validating the model through pilot projects with corporate partners and the collaboration with UNSW; once the model is validated, expansion can proceed gradually. Our team believes it is vital for RG to maintain a balance between its commercial objectives and its social mission.

Conclusion

This report outlines a growth strategy for Reverse Garbage (RG)'s B2B educational workshops. The research reveals that RG's current client base is heavily concentrated in the K-12 sector, with extremely low penetration rates among corporations and universities. The primary reason corporations do not choose RG is not a preference for light-touch team-building activities, but rather a misalignment in perceived value—corporations prioritize quantifiable ESG data and brand exposure, whereas RG's workshops place greater emphasis on educational content; low participation from universities stems from the workshops' lack of in-depth subject-specific practical application.

Based on this, the report proposes three recommendations: firstly, to reposition corporate workshops as high-value ESG products, accompanied by certificates, ESG metrics and transparent pricing, with 15% of fees allocated to support local primary schools; secondly, to develop subject-based partnerships with universities, transforming RG's operational challenges into practical learning opportunities for business, supply chain and design faculties; and thirdly, to establish a B2B circular materials platform linking factories, schools and NGOs, selling standardized material kits. These three recommendations are mutually reinforcing and will help RG achieve its strategic goals of increasing corporate revenue and generating its first-ever income from universities within three years.

Acknowledgements

Firstly, we would like to express our sincere gratitude to the COMM5030 training team for their tremendous support, with a special thank you to Dr Linh Nguyen and Mr Ed Poek, whose invaluable guidance has been of immense significance to us. We would also like to extend our heartfelt thanks to Reverse Garbage. We are deeply grateful to the company for the valuable guidance and collaboration they have provided, which has enriched our experience of the social entrepreneurship practical course. In particular, we would like to thank CEO Kirsten and the training team, who unhesitatingly set aside time for in-depth interviews and shared advanced concepts regarding organizational management, client groups and strategic vision, thereby laying a solid foundation for the analysis in this report. Their fifty years of continuous work in the field of creative business applications have served as a key driving force in prompting us to reflect on how to strike a balance between corporate sustainability and social mission. Finally, we would like to express our heartfelt gratitude to the entire team. It is precisely due to the high level of cooperation and professional attitude of every member of this team that this report has been completed.

Artificial intelligence tools were used to support the development of this report. The main uses included generating and refining visual materials, assisting with the initial alignment of tasks and report structure, improving sentence-level grammar and clarity, and supporting the search for relevant references. All AI-generated outputs were reviewed, edited, and verified by the group. The final analysis, interpretation, recommendations, and written submission remain the responsibility of the authors.
